

week 4 : Hello World RESTful Web Service

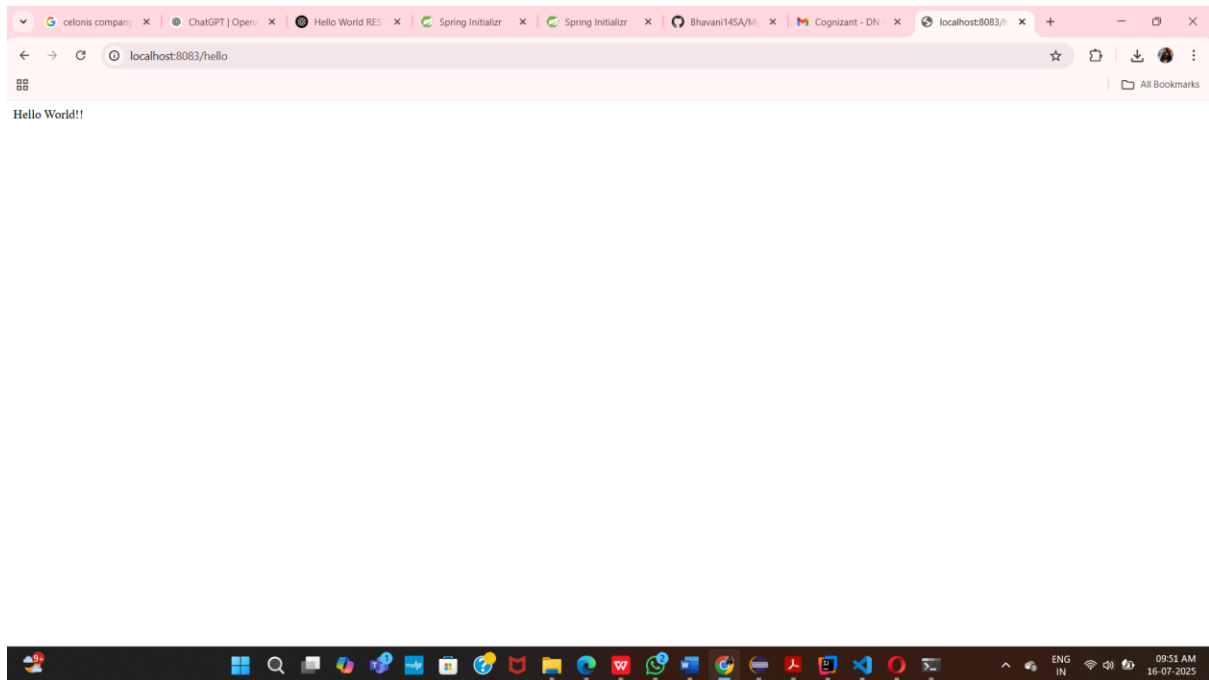

Output Snapshot:

Run , mvn spring-boot:run

To see : Tomcat started on port(s): 8083 (http)...

A screenshot of a Windows Command Prompt window titled "Command Prompt". The terminal output shows the execution of a Java application named "spring-hello-world" using Spring Boot version 3.5.3. The process starts with a "test-compile" command, which triggers several log messages from the IDE's build system (IntelliJ IDEA). These messages indicate resource copying, compilation by javac, and recompiling due to source file changes or dependencies. After the compile phase, another "test-compile" command is run, followed by the main application launch. The application logs show it started successfully at PID 18816. Subsequently, a second "test-compile" command is executed, and the application logs show it restarted. Finally, the application logs show it restarted again, indicating a successful test run cycle. The bottom of the screen displays the Windows taskbar with various icons and the system clock showing 09:31 AM on 16-07-2025.

In chrome browser : to see hello world !!

In postman :
